

**Solution 120 (Matt-white)** by Screen Solution makes realistic image presentation through color sense, temperature of color, and comparing the colors. It could make people enjoy the picture without hinder of light from any angle since it has wide view angle than other type of screen. Through the Korea's first high-frequency of hydraulic system, coating facility, and pneumatic perforating system, big screen of 26M by 15M (wide and high) could be produced. It is used a lot with film and digital projector and is used a lot in the outdoor theater too thanks to easy maintenance.

## Application

**Solution 120 (Matt-white)** screens are recommended for use with flat and curved frames in lace-in or (floating) frame formats. The surface is also suitable for roller screen applications. Available in full screen perforated form where behind screen speakers are required (see attenuation curve). Mini-perforated and non-perforated options also available.

## General Detail

- Non Toxic
- Non Flammable
- Smoke Retardant
- Maximum Size: 15m x 26m
- Perforation Size:  $\phi$ 1.2mm
- Perforation Density: 4.70%
- Weight: 0.45kg/m<sup>2</sup>
- Color Temperature: 6,200-6,300k
- Viewing Angle: 60°

## Maintaining the screen

1. Keeping it with the temperature 0°~30°, humidity less than 90%.
2. In case, it is exposed for high and low temperature for a long time, it should be set up after 1-2 days of room temperature.
3. In case of Pearl & Silver screen, it's better not to clean. In case of cleaning, the dust of screen is removed with soft cloth with warm water.
4. Should avoid for screen to be exposed to liquid of high temperature and alcohol etc.
