

**COATED MATT WHITE** by Screen Solution makes realistic image through color sense, temperature of color. It could make people enjoy the picture without hinder of light from any angle since it has wide view angle than other type of screen. Through the Korea's first high-frequency of hydraulic coating facility and pneumatic perforating system, maximum screen of 27.5m X 16.5m (width and high) could be produced. It can be used a film and digital projector and installed outdoor theater too.

### Application

- COATED MATT WHITE 1.13 screens are recommended for use with flat and curved frames in lace-in or (floating) frame formats. The surface is also applied for roller screens and a full screen perforated form where behind screen speakers are required. Mini-perforated and non-perforated screens are also available.

### COATED MATT WHITE 1.13
